### **DETAILED ACTION**

*Note: This is in response the amendment filed 12/02/2009.*

#### ***Election/Restrictions***

1. Applicant's election without traverse of Group I and species as shown in figures 1-3 in the reply filed on 10/08/2009 is acknowledged.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-14, 16, and 36-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lerman (US 4338937) in view of Rodewald (US 7546855).

Lerman discloses substantially as claimed including an elongated cannula 42 having a distal end which can be used for placement on one side of the tissue boundary and a trocar base 44 disposed at the proximal end of the cannula 42, with a trocar lumen 46 extending axially of said base from a proximal end thereof to said distal end of the cannula 42; a magnet 52 in said base capable of having a predetermined strength for holding a distal end of an elongated surgical instrument in place in alignment with the lumen 46; and wherein the magnet 52 comprises an annular disc disposed at said proximal end of the base surrounding said lumen 46. However, Lerman does not explicitly disclose the magnet 52 comprises an annular disc and the trocar cap having lumen and a funnel-shaped.

Rodewald teaches that it is known in the surgical art to have magnet 40 comprises an annular disc, trocar cap 20 have lumen 22 and a funnel-shaped 60 therein.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the cap of Lerman with an annular disc magnet and the trocar cap having lumen and a funnel-shaped therein as taught by Rodewald such that the magnetic field is sufficient to hold and guiding surgical instruments in the cap access port while in use.

***Response to Arguments***

4. Applicant's arguments with respect to claims 1, 14, and 36 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
